Ben,

Both amendments are in, and I verified them by differencing the two deposits: the only substantive changes are the two required.

Table 1 now reads correctly on both halves. I audited the referent of every entry in that row this time, which is the step I skipped before; under the cocycle Δ ≡ 0, so V_in = V_out = {0} and the obstruction of Theorem 4.5 is trivial, Corollary 4.6 bounds a quantity
that vanishes, β vanishes as the second-order compatibility condition of Finding 1, and J(R) = 0 by Theorem 7.4. Theorem 4.8 was the only one of the five whose content does not vanish, and it is the one now split out with Theorem 4.8(c) and
Remark 4.9 cited against it.

On the fourth open question, dropping the exclusivity clause also removes the internal tension the sentence carried: it no longer asserts as established the qualitative form of what it then poses as open.
Saying plainly that you have no rigidity argument is the right way to leave it, and the subclass question is now the precise statement
of what is missing.

The revision numbering is settled for the file: revision 6.1 is the operative text, identifiable also by its date pair and by the presence
of Proposition 4.7 and Table 1.

Thank you also for the note on the "leading direction v ⊗ v" sentence. My objection was to your email and not to the manuscript,
which had it right, and I had already withdrawn it; your confirmation puts the record in the same place from both sides.

Once again I think, that the review cycle on this paper is closed favourably, with nothing outstanding of content or of record.

Best,
Ezequiel
