Dear Ben,

Please find attached my review of *Koopman Spectral Theory for Indivisible Stochastic Processes*.

I found the manuscript interesting and potentially valuable, particularly its deficit-based organisation and local measure of indivisibility. The attached report outlines mathematical, interpretive and presentation issues that I believe should be addressed in revision.

I hope the comments are helpful, and I will now begin reviewing *Convex Perturbation and the Suppression of the Indivisibility Deficit.*

Best regards,

Sara

Dear Ben,

Many thanks for the heads-up regarding PayPal. I'll update that shortly.

I confirm receipt of the payment and look forward to working through the papers.

I hope you have a good weekend.

Best regards,
Sara
